

Design for VR Office Collaboration

Abstract

The keynote “Human-Centered Design for VR Office Collaboration” will explore how virtual reality can transform the future of work by creating immersive, engaging, and human-centered digital offices. It will examine how thoughtful spatial design and organizational readiness can help balance productivity, well-being, and collaboration in VR workspaces. The talk will highlight both the opportunities and challenges of integrating VR into everyday work, offering insights into how organizations can prepare for this next step in hybrid and remote collaboration.
